CONCRETE CURING BLANKETS

POLY-B, CURING BLANKETS

POLY-B, Concrete Curing Blankets result from an innovative laminating process that combines the reflective ability of opaque 4 mil polyethylene with the moisture retaining characteristics of tear resistant 10 oz. burlap. **POLY-B Curing Blankets** maintain moisture without evaporation thus slowing the curing process resulting in harder finished concrete. **POLY-B Curing Blankets** are highly reusable and designed for use on highways, decks, slabs, support columns, barrier walls, flood walls and more. Stock sizes are available in 5', 10', 15' and 20' widths x 100' lengths. Custom panels are available on request. **POLY-B Concrete Curing Blankets** meet or exceed specifications set forth in ASTM C-171, Type 1.1.3, and AASHTO M-171, Type 1.1.3.
